

Environmental Discussion – Hypothetical: What are we eating in 2050?

Have you ever stopped to think about what we will be eating in 2050? What has happened to our food supply and agriculture? Will our aging population and growing obesity continue and affect our health systems and government policies? And what will the dietitian's role look like in this context?

This year, you are invited to join a hypothetical panel discussion 'Eating in 2050.' The panel will take us from current time, to 10 years into the future, then forward through 20, 30, 40 years, exploring how time will shape Australia towards 2050. The panel will delve into how environmental change could affect Australia's agriculture and food production, health care, population control, defense and homeland security, living conditions, employment family life and Government. And ultimately, what will be in like for our profession, as dietitians and nutritionists, in 2050.

The hypothetical will be held on Friday 28th May and will be facilitated by Dr Paul Willis from ABC's Catalyst program. The lively panel includes Malcolm Riley, Lisa Yates, Nicole Senior, Mark Lawrence, Kathy McConnell, Gabrielle O'Kane and Emma Stirling – a strong panel with a diverse range of dietetic knowledge and skills. This will be a thought provoking and energetic event not to be missed!
