Spontaneous heterotopic early pregnancy: intracavitary and tubal, followed by laparoscopic and legal artificial abortion

Mirko Mačkić* Vladimir Gerginić* Aleksandar Jurišić*

Introduction

Heterotopic pregnancy (HP) represents the coexistence of two or more pregnancies simultaneously in two or more different places. Intrauterine (IU) along with extrauterine (EU) location is the most common. Potential places for ectopic conceptus are cervix, cornu, ovary and abdominal organs. Risk factors for EU pregnancy are previous tube and uterus operations and chronic pelvic disease.

β-hCG level on admission: 39,481.66 IU/L

The patient fully recovered, and was discharged from the Clinic two days after the admission.

The incidence of spontaneous HP is around 1:30,000.

Our Clinic reported in past three years (2016-2018) 22,099 deliveries and 2 HP.
