P20.05. Prenatal diagnosis of inferior vena cava duplication (Dual IVC)

Hassan Bakry¹, Zvi Leibovitz¹, Israel Shapiro¹, Boris Weizman¹, Gil Cohen¹, Leila Haddad¹, Liat Yaniv²³

¹Ob/Gyn Ultrasound Unit, Bnai-Zion Medical Center, Haifa, Israel; ²Pediatric Bnai-Zion Medical Center, Haifa, Israel; ³The Ruth and Bruce Rappaport Faculty of Medicine, Technion, Haifa, Israel.

• A female was delivered at 38 weeks
• Weight 3045gr, Apgar score 9/10
• Postnatal ultrasound confirmed the diagnosis

A prenatal diagnosis of infra-renal anomalies of the IVC is possible and may in-fact be easier then later. Awareness of this anomaly may prove to be of utmost importance to the radiologist, cardiologist, surgeon, clinician and the patient in later years.
